

Digital sensor for temperature, humidity, and atmospheric pressure FHAD46-x

Example:
ALMEMO® D6-sensor
FHAD 46-41

Digital sensor for temperature, humidity, and atmospheric pressure FHAD46-x, with ALMEMO® D6 plug with integrated atmospheric pressure sensor for automatic pressure compensation

Common technical features FHAD 46x

- Digital capacitive humidity sensor with integrated signal processor
- All sensor characteristics and adjustment data are saved in the humidity sensor element itself.
- Humidity sensor element, plug-in : Spare elements are inexpensive; a replacement can be fitted on site quickly and easily by virtually anyone; it will be fully accurate straight away needing no special adjustment.
- **new:** A digital atmospheric pressure sensor integrated in the ALMEMO® D6 plug itself provides automatic pressure compensation for all pressure-dependent humidity variables.
- All relevant ambient parameters are measured with just one sensor.
- **new:** Humidity calculation on the basis of formulae as per Dr. Sonntag and the enhancement factor as per W. Bögel (correction factor fw(t,p) for real mixed gas systems)

This substantially widens the measuring range and improves the accuracy of humidity variable calculations.

- **new:** Humidity variable : Absolute humidity in g/m³
- The humidity variables are calculated from the three primary measuring channels (real measurable variables). temperature, relative humidity, atmospheric pressure
- Freely selectable measurable variables
Four measuring channels are programmed (at our factory).
temperature (°C, T, t), relative humidity (%H, RH, Uw), dewpoint (°C, DT, td), atmospheric pressure (mbar, AP, p)
Other humidity variables can also be selected.
mixture (g/kg, MH, r), absolute humidity (g/m³, AH, dv), vapor pressure (mbar, VP, e), enthalpy (kJ/kg, En, h)
This device can be configured on a PC using USB adapter cable ZA1919AKUV. (see page 04.05).
